CSV | ASK ABOUT THIS RUN

READS	ASSIGNED (≥ 95%)	MEDIAN IDENTITY	TAXA DETECTED
309,155	24.3%	100.0%	69
23,080 distinct sequences	75,244 reads	assigned reads · all: 70.7%	distinct, among assigned reads

RUNTIME

11.5 min

16,592 references searched

CONFIDENCE DECISIONS

Share of all reads in each tier. Darker means a more confident call.

Assigned

75,244 24.3%

identity ≥ 95% — a confident species-level call

Best guess

70,539 22.8%

identity 75–95% — a plausible lead, below the calibrated confidence bar

Low-confidence guess

163,372 52.8%

identity < 75% — nearest known relative only, weak match

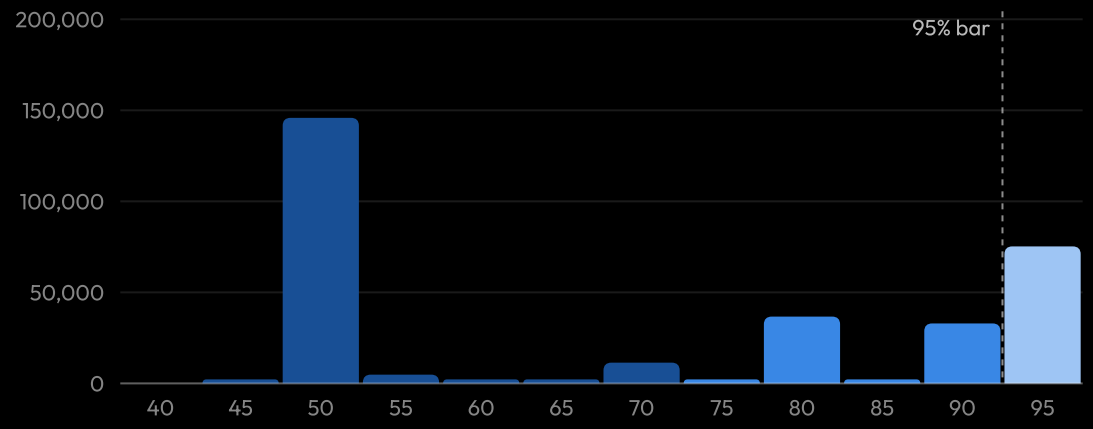

Unclassified

0 0.0%

no reference shares any 6-mer with the read

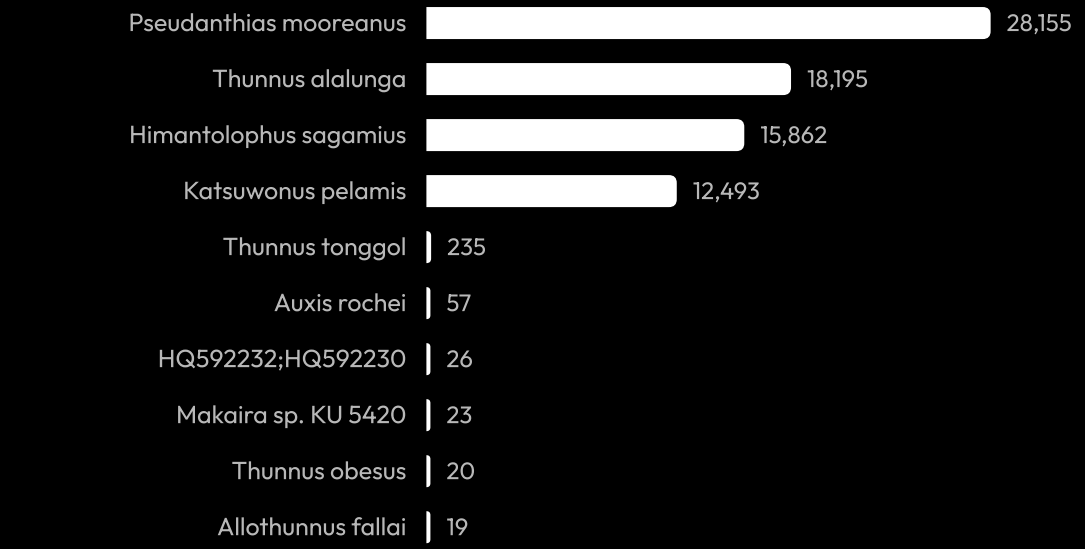

IDENTITY TO NEAREST REFERENCE

Reads per 5-point bin. Reads at ≥ 95% are assigned.

MOST-DETECTED TAXA

Assigned reads only, by nearest reference organism.

INPUT & REFERENCES

Read length (min / median / max)	59 / 121 / 140 bp
Primers	none (reads used as uploaded)
Reads reaching the classifier	309,155
Distinct references hit (assigned)	73
Top-10 references' share of assigned	99.8%

⚠ **Concentrated hits.** 99.8% of assigned reads land on the top 10 references (flagged at ≥ 80%). That can be a genuinely dominant species, or *hubness* — a few references absorbing unrelated reads (Explanation.md,

Parts 2–3). Median identity of the assigned reads is 100.0%, well above the bar, which points to real matches; check the read table to be sure.

READ EXPLORER

Every read with its nearest reference and decision. Filter, then page through.
